**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1 and 3-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Keller (5,423,443) in view of Stanford et al. (5,456,830).

Keller discloses, in figs. 1 and 8, a dispensing device comprising a stopper 1 having a tighten flange and a removable traction disk 15; and a locking ring 33 with bayonet connecting means; wherein the dispensing device is a double cartridge and the stopper comprises two plugs.

Keller is silent as disclosed the bayonet connecting means comprising a mutually cooperating means having traction slopes and a tighten slopes as claimed.

Stanford et al. disclose, in figs. 3 and 4, bayonet connecting means 24, 36 comprising a mutually cooperating means having slopes (inclined cams) having ridges 24 on an external surfaces of an outlet, each comprising a slope on it upper side and a slope on it lower side, and corresponding ring ridges 36 on an inside of a locking ring, each comprising a slope (inclined cam on it upper side and a slope (inclined cam) on it lower side.

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the bayonet connecting means of the

Keller dispensing device with bayonet connecting means comprising a mutually cooperating means having slopes, as claimed, as taught by Stanford et al., in order to provide a quick locked connection and unlocked disconnection between the locking ring and the outlet of the dispensing device.

The Keller dispensing device is provided with bayonet connecting means comprising a mutually cooperating means having slopes, as claimed, as taught by Stanford et al., then the connecting means will provide functions as traction slopes and tight slopes as claimed when the locking ring rotates in screwing and unscrewing positions.

#### ***Response to Arguments***

2. Applicant's arguments filed 3/19/09 have been fully considered but they are not persuasive as pointed out in the rejection above.

#### ***Conclusion***

3. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
